

The Antimicrobial Spectrum of Disinfectants

Chemical Disinfectants

Note: Removal of organic material must always precede the use of any disinfectant.

susceptibility of microorganisms to chemical disinfectants	Acids (hydrochloric acid, acetic acid, citric acid)	Alcohols (ethyl alcohol, isopropyl alcohol)	Aldehydes (formaldehyde, paraformaldehyde, glutaraldehyde)	Alkalis (sodium or ammonium hydroxide, sodium carbonate)	Biguanides (chlorhexidine, Nolvasan, Chlorhex, Virosan, Hibistat [®])	Halogens iodine	Oxidizing Agents (hydrogen peroxide, peroxyacetic acid, Trifectant [®] , Virkon-S, Oxy-Sept 333 [®])	Phenolic Compounds (Lysol, Oxy [®] , Amphyl, TekTrol [®] , Pheno-Tek II [®])	Quaternary Ammonium Compounds (Roccal, Zephiran, DiQuat [®] , Parvosol [®] , D-256 [®])
